DETAILED ACTION

Response to Arguments

Applicant's arguments, see Remarks, filed 01/10/2007, with respect to claims 4-6 have been fully considered and are persuasive. The rejection of the claims has been withdrawn.

The examiner agrees that the previously cited references do not read on the gain medium limitations.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 4-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Thornton et al. (US 4980893) in view of Kahen (US 2003/0147437).

With respect to claims 4 and 6, Thornton teaches an array type optical device comprising: a substrate (fig.1 #12), a lower cladding layer (fig.1 #14) formed over the

Application/Control Number: 10/507,388 Page 3

Art Unit: 2828

substrate, a plurality of linear gain medium structures (fig.1 five gain medium 'structures' formed in layer #16) formed on the lower cladding layer, wherein the gain medium structures are densely disposed and curved at their terminals (curved at end terminals, left/right #16s in shaded #28s, due to disordering of the active material). Thornton does not teach the use of optical pumping from above. Kahen teaches an arrayed laser device which utilizes optical pumping via LEDs ([0026]). It would have been obvious to one of ordinary skill in the art at the time of the invention to combine the arrayed laser device of Thornton with the LED pumped arrayed laser device of Kahen in order to alleviate the need for current injection apparatuses, as well as to reduce processing time due to the eliminated need of the current non-injection areas, as optical pumping is well known in the laser art.

A reference noted, but not relied upon, is that of Donnelly (US 48814237, 1989), which describes the option of utilizing optical pumping to stimulate emission from a laser array structure (col.5 lines 35-37).

With respect to claim 5, Thornton further teaches the use of an upper clad layer formed on the gain medium (fig.1 #18, inherently necessary to transmit the optical pumping light in order for stimulated emission to occur and the device of Thornton/Kahen to function).

Art Unit: 2828

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tod T. Van Roy whose telephone number is (571)272-8447. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Minsun Harvey can be reached on (571)272-1835. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
